GRADE 11 OPINION PARAGRAPHS

Is it better to listen to fast energetic music or slow calm music when studying?

Model Answer

I believe that listening to slow, calm music is much better when studying because gentle melodies reduce anxiety and help the mind focus more deeply. On the one hand, peaceful music can lower stress and make students feel more comfortable while studying. For example, a soft melody can help a student stay calm when preparing for a difficult exam. Also, quiet music can improve concentration and make it easier to pay attention to schoolwork. On the other hand, some teenagers argue that high-energy music is better because it prevents boredom while studying. However, loud lyrics and strong beats can easily distract students and make concentration difficult. Moreover, slow classical or instrumental music creates a peaceful study environment and allows students to work more effectively. In conclusion, although fast music can be entertaining and motivating, calm music remains the best choice for effective studying and academic success.

Structure

- Topic sentence: "I believe that listening to slow, calm music is much better when studying because gentle melodies reduce anxiety and help the mind focus more deeply."
- First supporting idea: Peaceful music can lower stress and make students feel more comfortable while studying.
- Example: "For example, a soft melody can help a student stay calm when preparing for a difficult exam."
- Additional supporting idea: Quiet music can improve concentration and make it easier to pay attention to schoolwork.
- Opposite side of the argument: Some teenagers argue that high-energy music is better because it prevents boredom while studying.
- Counter-argument: Loud lyrics and strong beats can easily distract students and make concentration difficult.
- Additional supporting idea: Slow classical or instrumental music creates a peaceful study environment and allows students to work more effectively.
- Concluding sentence: "In conclusion, although fast music can be entertaining and motivating, calm music remains the best choice for effective studying and academic success."
- Linking words used: because, on the one hand, for example, also, on the other hand, however, moreover, although, in conclusion

MODEL ANSWERS

OPINION PARAGRAPH 1

Should physical education (PE) be mandatory for every student?

Physical education should be mandatory for all students **because** it promotes long-term health and helps develop essential social skills. **On the one hand**, regular exercise during the school day is vital for physical well-being, as it helps prevent lifestyle-related illnesses and keeps students active. **For example**, participating in team sports like football or basketball encourages students to stay fit while learning the importance of cooperation and teamwork. **Also**, physical activity is known to reduce stress and improve mental clarity, which can actually help students perform better in their academic subjects. **On the other hand**, some people argue that PE can be stressful for students who are not naturally athletic or who prefer to focus solely on their studies. **However**, a well-designed program can offer a variety of activities, such as yoga or personal fitness, to ensure that everyone feels comfortable and included. **Moreover**, school is often the only place where some children have the opportunity to engage in organized sports. **In conclusion**, although some students may find physical education challenging, its benefits for physical health and character development make it a necessary part of the school curriculum.

OPINION PARAGRAPH 2

Is the internet the most important invention of the modern age?

The internet is undoubtedly the most important invention of the modern age because it has fundamentally changed how humans communicate, learn, and work. On the one hand, the internet provides instant access to a global library of information, which has revolutionized education. For example, students can now take online courses from universities across the world or research any topic in seconds without leaving their homes. Also, it has made global communication nearly free and instantaneous, allowing businesses and families to stay connected across continents. On the other hand, some people argue that older inventions like electricity or the wheel were more important because they provided the foundation for all later technology. However, while those inventions were vital, the internet is unique because it connects the entire world into a single digital community. Moreover, modern healthcare and transportation systems now rely entirely on internet connectivity to function safely. In conclusion, although there have been many great inventions in history, the internet's ability to unite the world and democratize information makes it the most significant breakthrough of our time.

OPINION PARAGRAPH 3

Should students have a shorter summer vacation?

I believe that students should not have a shorter summer vacation because they need a long time to rest and enjoy the outdoors. On the one hand, a long break allows children to relax after a hard year of studying and exams. For example, students can go to the beach, visit their grandparents, or play sports like volleyball with their friends all day. Also, during a long summer, kids have the chance to learn new hobbies that they do not have time for during school, such as swimming or painting. On the other hand, some teachers argue that a long break is bad because students might forget what they learned in class. However, parents can help by giving their children fun books to read or educational games to play at home. Moreover, starting the new school year feeling fresh and happy is more important than memorizing every single lesson. In conclusion, although some people want more school days, a long summer holiday is necessary for a student's health and happiness.

OPINION PARAGRAPH 4

Should junk food be banned from school cafeterias?

I strongly believe that junk food should be banned from school cafeterias because it negatively affects students' health and their ability to concentrate in class. On the one hand, eating sugary snacks and greasy fast food leads to energy crashes, which makes students feel tired during their lessons. For example, if a student eats a large donut for lunch, they might find it difficult to focus on a math test in the afternoon. Also, providing only healthy meals helps children develop good eating habits that will protect them from illnesses in the future. On the other hand, some people argue that students should have the freedom to choose what they want to eat. However, schools have a responsibility to create a safe environment, and that includes protecting students from unhealthy choices. Moreover, when the school only serves nutritious food like fruit and vegetables, everyone has the same high energy levels for sports and activities. In conclusion, although some students might miss their favorite snacks, removing junk food from schools is a necessary step for a healthier and more focused generation.

OPINION PARAGRAPH 5

Is it better to travel by car or by bicycle?

I believe that traveling by bicycle is much better than using a car because it is better for the environment and helps people stay healthy. On the one hand, bicycles do not produce any pollution, which helps keep the air in our cities clean and protects nature. For example, if more students cycled to school instead of being dropped off in cars, there would be much less traffic and smoke in front of the school gates. Also, cycling is a great form of exercise that makes your heart and legs stronger while you travel. On the other hand, some people argue that cars are better because they are faster and protect you from bad weather like rain or snow. However, cars are very expensive to buy and maintain, and they contribute to global warming. Moreover, in a busy city, a bicycle can sometimes be even faster than a car because it can move easily through heavy traffic. In conclusion, although cars are a useful invention for long distances, the bicycle is the best choice for daily travel because it is cheap, healthy, and eco-friendly.

OPINION PARAGRAPH 6

Is it better to meet friends in person or talk to them online?

I believe that meeting friends in person is much better than talking to them online because face-to-face interaction builds stronger and more meaningful friendships. On the one hand, when you are with your friends in real life, you can share activities and see their true emotions. For example, playing a game of volleyball or going for a walk in nature allows you to create real memories together that you cannot get through a computer screen. Also, being together in person helps you understand body language and tone of voice, which prevents misunderstandings. On the other hand, some people argue that online communication is better because it is fast and allows you to talk to friends who live in different cities. However, spending too much time on social media can make people feel lonely and disconnected from the real world. Moreover, the best digital inventions can never replace the feeling of a real conversation or a shared laugh with a friend. In conclusion, although the internet is a great tool for staying in touch, meeting in person is the most important way to keep a friendship healthy and happy.

OPINION PARAGRAPH 7

Are e-books better than traditional paper books?

I believe that traditional paper books are better than e-books because they provide a better reading experience and do not require electricity or batteries. On the one hand, physical books allow the reader to focus completely without the distractions of a screen. For example, when you read a real book, you do not get notifications from social media or emails, which helps you understand the story better. Also, many students find that their eyes feel less tired when they read from paper instead of a bright digital device. On the other hand, some people argue that e-books are better because they are a modern invention that can hold thousands of stories in one small device. However, a digital device can break or run out of power, while a paper book can be kept on a shelf for many years. Moreover, the feeling of turning real pages and the smell of a new book make reading more enjoyable for children. In conclusion, although e-books are convenient for traveling, traditional paper books are still the best choice for learning and enjoying a great story.

OPINION PARAGRAPH 8

Should we stop using plastic bags and bottles to protect nature?

I strongly believe that we should stop using plastic bags and bottles because they are the biggest cause of pollution in our oceans and forests. On the one hand, plastic is a dangerous material that takes hundreds of years to disappear from nature. For example, many sea animals like turtles often mistake plastic bags for food, which can cause them a lot of harm. Also, when we throw away plastic bottles, they stay in the ground for a very long time and hurt the soil. On the other hand, some people argue that plastic is a very useful invention because it is cheap, light, and easy for people to carry. However, we can easily replace plastic with better inventions like glass bottles and cloth bags that we can use many times. Moreover, keeping our nature clean is much more important than the convenience of using plastic for a few minutes. In conclusion, although plastic is a popular material, we must stop using it to ensure that our planet stays healthy and beautiful for the future.

OPINION PARAGRAPH 9

Is it better to exercise at home using technology or at a gym with a coach?

I believe that exercising at a gym with a coach is much better than exercising at home because a professional trainer can provide motivation and ensure that you are moving safely. On the one hand, a coach can create a personal plan that is perfect for your body and your goals. For example, if a student wants to improve their volleyball skills, a coach can show them specific exercises to jump higher and move faster. Also, being at a gym allows you to use many different inventions and machines that you do not have at home. On the other hand, some people argue that exercising at home is better because it is more convenient and you can use fitness apps or YouTube videos for free. However, without a real person to watch you, it is easy to make mistakes that could lead to an injury. Moreover, the social environment of a gym makes working out more fun and helps you stay committed to your health. In conclusion, although technology makes home workouts easy, the guidance and safety of a real coach make the gym the best place for exercise.

OPINION PARAGRAPH 10

Can robots and new inventions solve the problem of climate change?

I believe that new inventions and robots are essential tools that can help us solve climate change because technology allows us to protect nature more efficiently than ever before. On the one hand, scientists are creating amazing inventions like machines that can pull carbon dioxide out of the air or robots that can plant thousands of trees in a single day. For example, some countries are already using underwater robots to repair coral reefs and clean plastic from the bottom of the ocean. Also, smart inventions in green energy, like better solar panels, allow us to power our homes without hurting the environment. On the other hand, some people argue that technology is not enough and that humans must simply change their behavior and consume less. However, while changing our habits is important, we need high-tech inventions to fix the damage that has already been done to our planet. Moreover, the combination of human care and robotic speed is the fastest way to save our forests and wildlife. In conclusion, although technology alone is not a magic solution, these modern inventions are our best hope for a cleaner and greener future.

OPINION PARAGRAPH 11

Is it better to live in a house with a garden or in a modern apartment?

I believe that living in a house with a garden is much better than living in an apartment because it provides more freedom and a closer connection to nature. On the one hand, having a private garden allows you to spend time outdoors and grow your own fruits or vegetables. For example, families can have a small garden where they plant trees or flowers, which makes the air around the home much fresher and cleaner. Also, a house usually offers more space for hobbies and sports, such as playing volleyball or having a barbecue with friends. On the other hand, some people argue that modern apartments are better because they are closer to city centers and require less maintenance. However, the noise and crowded atmosphere of an apartment building can be very stressful compared to the peace of a private house. Moreover, living in a house teaches children to respect nature and care for the environment around them. In conclusion, although apartments are convenient for busy workers, the health benefits and quiet life of a house with a garden make it the best choice for a happy family.

OPINION PARAGRAPH 12

Will robots ever replace teachers in the classroom?

I firmly believe that robots will never fully replace teachers in the classroom because education requires human empathy and emotional intelligence that technology cannot replicate. On the one hand, robots are amazing inventions that can store more information than any human and can help students with technical tasks. For example, a robot could help a student practice their English pronunciation or grade a math test in seconds. Also, robots never get tired and can provide 24-hour support to students who are studying at home. On the other hand, some people argue that robots are the future of education because they are faster and more objective than humans. However, a robot cannot understand a student's feelings or encourage them when they are having a difficult day. Moreover, teaching is about more than just giving information; it is about building a relationship and inspiring young minds to dream. In conclusion, although robots are useful tools in a modern school, the heart of a classroom will always be a human teacher who cares about their students.

OPINION PARAGRAPH 13

Is it better to shop online or go to a physical store?

I believe that shopping in physical stores is much better than shopping online because it allows you to see the quality of products and helps support the local community. On the one hand, when you visit a shop in person, you can try on clothes or test inventions before you buy them. For example, if you are buying a new ball for volleyball, you can check its weight and material to make sure it is perfect for your game. Also, going to a store is a social activity that lets you spend time with friends or family in the real world. On the other hand, some people argue that online shopping is better because it is faster and you can find cheaper prices from around the world. However, waiting many days for a delivery can be frustrating, and sometimes the item you receive is not what you expected. Moreover, traditional shops make our city centers lively and provide jobs for local people. In conclusion, although the internet is a convenient invention, the experience and reliability of physical stores make them the best choice for shoppers.

OPINION PARAGRAPH 14

Is it better to do homework on a computer or in a paper notebook?

I believe that doing homework in a paper notebook is much better than using a computer because it helps students concentrate more and improves their memory. On the one hand, writing by hand is a traditional method that allows the brain to process information more deeply. For example, when a student writes down new English vocabulary in a notebook, they are more likely to remember the spelling than if they just typed it quickly. Also, using a notebook means there are no digital distractions like games or social media notifications that can break a student's focus. On the other hand, some people argue that computers are better because they are a modern invention that allows you to find information and fix mistakes very fast. However, spending too much time looking at a screen can cause eye strain and tiredness after a long school day. Moreover, a notebook never needs to be charged and is easy to carry anywhere. In conclusion, although computers are useful for research, the benefits of focus and memory make the paper notebook the best tool for successful homework.

OPINION PARAGRAPH 15

Is it better to exercise in a gym or outside in nature?

I strongly believe that exercising outside in nature is much better than going to a gym because fresh air and natural light significantly improve both physical and mental health. On the one hand, being outdoors allows you to enjoy beautiful scenery while staying active, which makes the workout feel less like a chore. For example, running in a park or playing a match of volleyball on a beach is much more refreshing than running on a treadmill in a closed room. Also, nature provides a variety of terrain, like hills or sand, which helps to challenge your muscles in different ways. On the other hand, some people argue that the gym is better because it has modern inventions and machines that protect you from the rain or cold weather. However, the artificial environment of a gym can feel boring and repetitive compared to the changing beauty of the outdoors. Moreover, spending time in nature is known to reduce stress and help students feel more relaxed after a long day of school. In conclusion, although the gym has useful equipment, the fresh air and natural surroundings of the outdoors make it the perfect place for a healthy lifestyle.

OPINION PARAGRAPH 16

Should the school day start later in the morning to give students more sleep?

The school day should start later in the morning because it would improve students' mental health and academic performance. On the one hand, many teenagers naturally stay up late and struggle to wake up early, which means they are often exhausted during their first few lessons. For example, a student who gets nine hours of sleep is much more likely to concentrate on a difficult math problem than one who only gets six. Also, a later start would reduce the stress of the morning rush for both students and parents. On the other hand, some people argue that starting later would mean finishing later, leaving less time for sports and homework in the evening. However, the quality of learning is more important than the quantity of hours spent in a classroom. Moreover, well-rested students are less likely to get sick or feel stressed. In conclusion, although a later start would require changing family schedules, the benefits for student well-being make it a necessary change for modern schools.

OPINION PARAGRAPH 17

Should people be allowed to play loud music in public places like parks or buses?

People should not be allowed to play loud music in public places because it disturbs the peace and shows a lack of respect for others. On the one hand, public spaces are meant to be enjoyed by everyone, and many people visit parks to enjoy the quiet sounds of nature. For example, a family trying to have a peaceful picnic might find it impossible to talk if someone nearby is playing loud music on a speaker. Also, on buses or trains, loud music can be very annoying for passengers who are trying to read or rest after a long day of work. On the other hand, some argue that playing music is a form of free expression and makes the atmosphere more lively and fun. However, personal freedom should not interfere with the comfort of the rest of the community. Moreover, using headphones is a simple invention that allows people to enjoy their music without bothering anyone else. In conclusion, although music is a wonderful thing, it should be kept private in public areas to ensure that everyone can enjoy the space comfortably.

OPINION PARAGRAPH 18

Is it better to be a famous “influencer” or to have a traditional professional job?

I believe that having a traditional professional job is better than being a famous influencer because it provides long-term stability and a clear separation between private and work life. On the one hand, traditional careers like being a doctor, teacher, or engineer offer a steady salary and clear goals. For example, a teacher at a center like ZEYN knows their schedule and can plan their future with confidence. Also, these jobs allow you to help society in a direct and measurable way. On the other hand, some people argue that being an influencer is better because you can earn a lot of money and travel the world while using modern technology. However, the life of an influencer is very unstable, and their popularity can disappear in a single day. Moreover, being famous online means that you lose your privacy and are constantly judged by strangers. In conclusion, although social media fame looks exciting, the security and privacy of a traditional career make it a much better choice for a successful life.

OPINION PARAGRAPH 19

Should we use artificial grass (synthetic) instead of natural grass in school playgrounds?

I believe that schools should use natural grass instead of artificial grass because it is better for the environment and provides a safer surface for students to play on. On the one hand, natural grass helps keep the air clean and provides a home for small insects and birds. For example, a natural playground stays much cooler during hot summer days, whereas artificial grass can become very hot and uncomfortable. Also, playing on real grass connects children with nature every day. On the other hand, some people argue that artificial grass is a better invention because it does not need water and stays green all year round without any work. However, synthetic grass is made of plastic, which eventually becomes waste and hurts the planet. Moreover, natural grass is softer, which reduces the risk of injury when students are running or playing sports. In conclusion, although artificial grass is easier to maintain, the environmental and health benefits of natural grass make it the best choice for a school environment.

OPINION PARAGRAPH 20

Should students be allowed to use "smartwatches" during physical education (PE) lessons?

I believe that students should be allowed to wear smartwatches during PE lessons because these inventions help them track their health and motivate them to be more active. On the one hand, smartwatches can measure heart rates and count steps, which gives students interesting data about their physical activity. For example, a student can see exactly how much energy they used during a volleyball match, which makes the lesson more exciting. Also, these devices can help teachers monitor if a student is working too hard or needs a rest. On the other hand, some argue that watches are a distraction and can be easily broken during contact sports. However, if students use protective covers and follow clear safety rules, the risk of damage is very low. Moreover, learning to use health technology is a valuable skill for a modern lifestyle. In conclusion, although there are some safety concerns, the ability of smartwatches to encourage a healthy and active life makes them a great tool for the gym.

OPINION PARAGRAPH 21

Is it better for students to learn from a human teacher or an educational video?

I strongly believe that learning from a human teacher is much better than watching educational videos because a teacher can answer specific questions and provide emotional support. On the one hand, a teacher at a center like ZEYN knows their students personally and can change the lesson to fit their needs. For example, if a student finds a grammar rule difficult, the teacher can explain it in a different way until the student understands. Also, teachers encourage students to work together and build social skills. On the other hand, some people argue that videos are a great invention because you can watch them many times and learn at your own speed. However, a video cannot listen to a student or help them feel confident when they make a mistake. Moreover, the interaction between a teacher and a student creates a much more engaging and fun atmosphere for learning. In conclusion, although videos are useful for extra practice, the guidance and care of a human teacher are essential for a successful education.

OPINION PARAGRAPH 22

Should people be allowed to keep exotic animals (like monkeys or snakes) as pets?

I believe that people should not be allowed to keep exotic animals as pets because these creatures belong in nature and require specialized care that most homes cannot provide. On the one hand, wild animals have complex physical and social needs that are impossible to meet in a domestic environment. For example, a monkey needs a large forest area and a social group to stay healthy, but in a house, it is often kept alone in a small cage. Also, some exotic pets can be dangerous to the owner and the community if they escape. On the other hand, some people argue that owning these animals is an interesting hobby and can help children learn about different species. However, looking at animals in their natural habitat or in a professional zoo is a much better way to learn without causing them stress. Moreover, the trade of exotic animals often leads to illegal hunting, which hurts the environment. In conclusion, although exotic pets may look exciting, the health of the animal and the safety of nature make it better to leave them in the wild.

OPINION PARAGRAPH 23

Is it better to play a team sport or an individual sport?

I believe that playing a team sport is better than an individual sport because it teaches students how to cooperate with others and builds strong social connections. On the one hand, team sports like volleyball or football require players to communicate and trust each other to win a match. For example, at a center like ZEYN, playing together helps students make new friends and learn how to support each other during a difficult game. Also, being part of a team teaches you that your individual effort contributes to a bigger goal. On the other hand, some people argue that individual sports are better because they teach you to be self-reliant and responsible for your own success. However, in the real world, most jobs require teamwork and communication, so learning these skills early is very beneficial. Moreover, the feeling of celebrating a victory with a group of friends is much more rewarding than winning alone. In conclusion, although individual sports build personal discipline, the social skills and joy of team sports make them the best choice for young people.

OPINION PARAGRAPH 24

Has the invention of the “video call” made our lives better or worse?

The invention of the video call has undoubtedly made our lives better because it allows people to maintain close relationships regardless of the distance between them. On the one hand, video calls provide a visual connection that traditional phone calls lack. For example, if a student is studying abroad, they can see their parents' faces and feel much closer to home, which reduces feelings of loneliness. Also, video technology has made it possible for teachers to give online lessons to students all over the world. On the other hand, some people argue that video calls are worse because they take away our privacy and can be tiring for our eyes. However, the ability to see body language and facial expressions makes communication much clearer and more personal than a text message. Moreover, this invention was essential for businesses and schools to continue working during difficult times. In conclusion, although technology can be tiring, the way video calls unite families and help us learn makes them one of the most important inventions of our time.

OPINION PARAGRAPH 25

Should famous athletes be paid millions of dollars for playing sports?

I believe that professional athletes deserve their high salaries because they have unique talents and their careers are often very short and physically demanding. On the one hand, top athletes like volleyball stars or football players provide entertainment to millions of people and bring huge profits to their clubs. For example, a famous player can sell thousands of jerseys and attract massive crowds to stadiums, which helps the economy. Also, these players must train for many hours every day and risk serious injuries that could end their careers at any time. On the other hand, some people argue that it is unfair for athletes to earn more than doctors or teachers who save lives and educate the next generation. However, the sports industry is a global business, and players are simply receiving a share of the money they help create. Moreover, only a very small number of people reach the top level, making their skills extremely rare. In conclusion, although the gap in pay seems large, the hard work and unique entertainment value of athletes justify their high earnings.

OPINION PARAGRAPH 26

Should we limit the number of tourists who visit beautiful natural sites?

I strongly believe that we should limit the number of visitors to natural sites because over-tourism causes permanent damage to the environment and wildlife. On the one hand, thousands of people visiting a forest or a beach every day lead to problems like littering and the destruction of plants. For example, in many famous national parks, the paths are becoming ruined and the animals are being scared away by the noise of crowds. Also, limiting visitors ensures that the people who do visit can have a more peaceful and educational experience. On the other hand, some argue against these limits because tourism provides jobs for local people and brings money to the country. However, if we destroy nature now for quick profit, there will be nothing left for tourists to visit in the future. Moreover, modern inventions like virtual reality can allow people to see these beautiful places without physically traveling there. In conclusion, although tourism is important for the economy, protecting the beauty of nature must be our first priority.

OPINION PARAGRAPH 27

Is the invention of “facial recognition” technology a good thing for society?

I believe that facial recognition technology is a positive invention because it significantly improves public safety and makes daily tasks more convenient. On the one hand, this technology helps police officers find missing people or identify criminals in crowded places very quickly. For example, many modern airports use facial recognition to make security checks faster, which reduces waiting times for travelers. Also, it is a very secure way to unlock our smartphones and protect our private information. On the other hand, some people argue that this invention is dangerous because it takes away our privacy and allows the government to track our movements. However, if there are strict laws to protect how our data is used, the benefits for safety are much greater than the risks. Moreover, this technology is a natural step in the evolution of digital security. In conclusion, although we must be careful with our privacy, the efficiency and safety provided by facial recognition make it a valuable invention for the modern world.

OPINION PARAGRAPH 28

Should people be required to plant trees in their gardens or local neighborhoods?

I believe that people should be encouraged to plant trees because it is one of the most effective ways to fight climate change and improve our local environment. On the one hand, trees provide oxygen, shade, and a home for many birds and animals. For example, if every family in a neighborhood planted just one tree, the air would become much cleaner and the area would stay cooler during the hot summer months. Also, having more green spaces is known to make people feel happier and less stressed. On the other hand, some people argue that they do not have enough space or time to care for a tree properly. However, even small trees or bushes can make a big difference, and local councils can provide help with planting. Moreover, teaching children how to plant and care for trees is a great way to respect nature. In conclusion, although it takes some effort, the long-term benefits of planting trees make it a vital responsibility for everyone who cares about the planet.

OPINION PARAGRAPH 29

Should schools replace all traditional whiteboards with interactive “smart” screens?

I believe that schools should use interactive smart screens because this invention makes lessons much more engaging and allows teachers to use a variety of media. On the one hand, smart screens allow students to interact with the lesson by touching the screen or playing educational games. For example, during a science lesson, a teacher can show a 3D video of the solar system, which is much more exciting than just looking at a picture in a book. Also, teachers can easily save their notes and share them digitally with students who are studying at home. On the other hand, some people argue that these screens are very expensive and can break easily. However, the technology is becoming more reliable every year, and the benefits for learning are worth the cost. Moreover, using digital tools in the classroom prepares students for their future lives in a high-tech world. In conclusion, although traditional boards are reliable, the interactive features of smart screens make them a superior tool for modern education.

OPINION PARAGRAPH 30

Should people be required to bring their own bags when they go shopping?

I believe that people should be required to bring their own reusable bags because it is a simple way to reduce plastic waste and protect our natural environment. On the one hand, single-use plastic bags are a major cause of pollution in our forests and oceans. For example, if every shopper in a city used a cloth bag instead of a plastic one, we could save millions of pieces of trash from entering nature every year. Also, reusable bags are much stronger and can carry heavier items without breaking. On the other hand, some people argue that it is inconvenient to remember to bring a bag every time they go to the store. However, keeping a small, foldable bag in your pocket or car is a very easy habit to start. Moreover, many shops now charge money for plastic bags, so bringing your own actually saves you money. In conclusion, although it requires a small change in behavior, the environmental benefits of using reusable bags make it an essential rule for a cleaner planet.

OPINION PARAGRAPH 31

Is it better to have PE lessons every day or just once a week?

I strongly believe that students should have physical education (PE) lessons every day because regular exercise improves both physical health and the ability to learn in other subjects. On the one hand, daily activity helps students stay fit and prevents them from feeling tired or bored during long lessons. For example, a quick 30-minute game of volleyball or running can refresh a student's mind before a difficult English or math class. Also, daily PE helps children build strong social skills and learn how to work as a team every single day. On the other hand, some people argue that having PE every day takes away too much time from academic subjects like science or history. However, research shows that active students actually have better concentration and memory than those who sit still all day. Moreover, physical health is just as important as academic success for a happy life. In conclusion, although the school schedule is busy, the benefits of daily exercise make it a vital part of a student's education.

OPINION PARAGRAPH 32

Should children learn how to code (computer programming) in primary school?

I believe that learning to code should be a mandatory subject in primary school because it is a fundamental skill for the modern world and helps develop logical thinking. On the one hand, computers are the most important inventions of our time, and understanding how they work is essential for almost every future career. For example, even at a young age, learning to build a simple game or program helps students solve problems creatively. Also, coding is a global language that allows children to communicate and collaborate with others around the world. On the other hand, some people argue that young children should focus on traditional skills like reading and writing first. However, coding can actually help with those skills by teaching students to be precise and organized in their thoughts. Moreover, the earlier a child starts learning technology, the more confident they will be as they grow up. In conclusion, although the school curriculum is already full, the importance of digital skills makes coding a necessary subject for all young learners.

OPINION PARAGRAPH 33

Should students go on school trips to natural places (like forests or mountains) every month?

I believe that students should have monthly school trips to nature because these experiences reduce stress and provide practical lessons that cannot be learned in a classroom. On the one hand, spending time outdoors is essential for a student's mental well-being and physical health. For example, a day spent hiking in the mountains or exploring a forest allows students to breathe fresh air and stay active, which helps them feel more relaxed. Also, nature is a "living laboratory" where students can see plants and animals in real life instead of just in books. On the other hand, some people argue that monthly trips are too expensive and take away too much time from important subjects like math or English. However, the social skills and environmental awareness that students gain during these trips are just as important for their future. Moreover, traveling together builds a strong sense of community and friendship among classmates. In conclusion, although planning trips requires effort, the health and educational benefits of being in nature make monthly excursions a wonderful idea for schools.

OPINION PARAGRAPH 34

Is it more important to play a sport for fun or to play to win?

I believe that playing a sport for fun is more important than playing to win because the primary goal of physical activity should be enjoyment and personal health. On the one hand, when students focus on having fun, they are more likely to stay active and continue playing sports throughout their lives. For example, in a friendly game of volleyball at a center like ZEYN, students can laugh and enjoy the movement without feeling the pressure of a score. Also, focusing on fun helps build a positive team atmosphere where everyone feels included regardless of their skill level. On the other hand, some people argue that playing to win is better because it teaches discipline, hard work, and how to handle competition. However, if the pressure to win becomes too high, students may stop enjoying the sport or feel like failures if they lose. Moreover, the most important life lessons in sports come from participating and trying your best. In conclusion, although competition can be exciting, the happiness and health benefits of playing for fun are the most valuable parts of any sport.

OPINION PARAGRAPH 35

Should governments spend money on space exploration or on solving problems on Earth?

I believe that governments should prioritize solving problems on Earth before spending money on space exploration because our planet faces urgent issues like climate change and poverty that need immediate funding. On the one hand, billions of people still lack clean water, food, and quality education. For example, if the money used for building rockets was spent on green inventions or better schools, we could improve the lives of millions of people today. Also, protecting our current environment is more logical than looking for a new home on another planet. On the other hand, some people argue that space exploration is a vital invention that leads to new technologies, such as satellite communication and weather forecasting. However, these technological breakthroughs mean very little if we do not have a healthy and peaceful planet to live on. Moreover, we must learn to take care of our own world before we try to explore others. In conclusion, although space is a fascinating mystery, the survival and well-being of people on Earth should always be the first priority.

OPINION PARAGRAPH 36

Is it better to watch professional sports on TV or to play sports yourself?

I strongly believe that playing sports yourself is much better than watching them on TV because active participation improves your physical fitness and builds real-world social skills. On the one hand, playing a sport like volleyball or football provides essential exercise for the body. For example, running and jumping during a match helps keep your heart healthy and your muscles strong. Also, playing with teammates teaches you how to communicate and solve problems together in real-time. On the other hand, some people argue that watching sports is better because you can learn strategies from the world's best athletes. However, sitting on a sofa for hours is a passive activity that does not help your health. Moreover, the feeling of accomplishment after a hard game is much more rewarding than just seeing someone else win. In conclusion, although watching sports can be entertaining, the physical and social advantages of playing make it the superior choice for a healthy life.

OPINION PARAGRAPH 37

Should cities replace all traditional cars with electric self-driving cars to reduce pollution?

I believe that cities should transition to electric self-driving cars because this invention can significantly reduce carbon emissions and make our streets safer for everyone. On the one hand, electric engines do not produce the smoke that hurts our nature and causes health problems for citizens. For example, if a busy city like Baku replaced all petrol cars with electric ones, the air quality would improve almost immediately. Also, self-driving technology can reduce traffic jams, which means less energy is wasted. On the other hand, some people argue that these cars are too expensive and that the technology is not yet perfect. However, as we build more charging stations and improve the software, these cars will become the most efficient way to travel. Moreover, removing human error from driving will save thousands of lives every year. In conclusion, although the change will take time and money, the benefits for the environment and public safety make electric self-driving cars a vital invention for the future.

OPINION PARAGRAPH 38

Should schools ban all outdoor sports during days with high air pollution?

I strongly believe that schools should ban outdoor sports when air pollution is high because exercising in dirty air can cause serious and long-term damage to a student's health. On the one hand, when we play sports, we breathe more deeply, which means more harmful particles enter our lungs. For example, running or playing football on a day with heavy smog can lead to asthma or other breathing difficulties for young children. Also, it is better to move the lesson inside a gym where the air can be filtered and kept clean. On the other hand, some people argue that missing sports lessons makes students less fit and that the schedule should not be changed. However, physical fitness should not come at the cost of lung health, and indoor exercise can be just as effective. Moreover, protecting nature and improving air quality should be the long-term goal so that students can play outside safely. In conclusion, although it is disappointing to stay indoors, the health of the students must always be the first priority on polluted days.

OPINION PARAGRAPH 39

Should students be allowed to use calculators in all math lessons?

I believe that students should not use calculators for every math lesson because relying too much on technology can prevent them from developing essential mental arithmetic skills. On the one hand, calculators are incredible inventions that save time and prevent small errors when solving very complex problems. For example, in advanced engineering or physics, using a calculator allows a student to focus on the logic of the problem rather than long multiplication. Also, knowing how to use technology is a necessary skill for most modern jobs. On the other hand, some argue that calculators make lessons much faster and more interesting for students. However, if a student always uses a device, they may struggle to do simple math in real-life situations, like checking their change at a shop. Moreover, practicing mental math is like exercise for the brain and improves overall logical thinking. In conclusion, although calculators are useful tools, they should only be used for difficult tasks to ensure that students' basic math skills remain strong.

OPINION PARAGRAPH 40

Will the invention of "Artificial Intelligence" (AI) make students lazier?

I believe that Artificial Intelligence will not make students lazier as long as it is used as a tool for learning rather than a way to avoid work. On the one hand, AI is a powerful invention that can help students understand difficult topics by explaining them in simple ways. For example, a student can use an AI tool to find practice questions for their summative exam or to check their grammar in an English essay. Also, technology can save time on boring tasks, allowing students to focus on more creative and complex ideas. On the other hand, some people argue that students will become lazy because they might ask the computer to write their entire homework for them. However, if teachers create clever assignments that require personal opinions and classroom discussion, the technology cannot do the work for them. Moreover, learning to work alongside AI is a vital skill for the future of all students. In conclusion, although there is a risk of misuse, the proper use of AI will actually help students become more efficient and knowledgeable.

OPINION PARAGRAPH 41

Is it better to host a major sports event like the Olympics or to spend that money on local sports facilities?

I believe it is better to spend money on local sports facilities because it provides long-term health benefits to the entire community rather than just a few weeks of entertainment. On the one hand, having modern gyms and volleyball courts in every neighborhood encourages students to stay active every day. For example, if a center like ZEYN had access to more local sports parks, more students would participate in physical education and build healthy habits. Also, local facilities are much cheaper to maintain than giant Olympic stadiums that often sit empty after the games are over. On the other hand, some people argue that hosting a major event is better because it brings fame and tourism to the country. However, the massive cost of these events often leads to debt and does not directly improve the daily lives of citizens. Moreover, a healthy nation is built on daily exercise, not on watching professional athletes once every four years. In conclusion, although the Olympics are exciting, investing in local sports is the best way to support the well-being of the people.

OPINION PARAGRAPH 42

Has the invention of “social media” made young people more or less social?

I believe that social media has actually made young people less social in the real world because digital interactions lack the emotional depth and physical presence of face-to-face communication. On the one hand, social media is a powerful invention that allows students to stay connected with friends and family across the globe instantly. For example, a student at ZEYN can use an app to share photos and messages with someone in another country, which is very convenient. Also, it helps people find groups who share their specific hobbies or interests. On the other hand, some argue that these platforms expand our social circles and make us more connected than ever. However, spending hours looking at a screen often leads to “digital loneliness,” where people have many online “friends” but no one to talk to in person. Moreover, it can distract students from important real-life activities like playing a match of volleyball. In conclusion, although social media is a useful tool for communication, it should not replace the valuable experience of meeting people in person.

OPINION PARAGRAPH 43

Should we stop building new factories and houses to protect our remaining forests?

I believe that we should limit the construction of new buildings in forest areas because the long-term health of our planet depends on preserving natural habitats. On the one hand, forests are the “lungs” of the earth, and they are essential for cleaning the air and fighting climate change. For example, if we continue to destroy trees to build factories, the air quality will decrease, and many unique animals will lose their homes forever. Also, nature provides a space for people to rest and stay healthy. On the other hand, some people argue that we must keep building to create jobs and provide homes for a growing population. However, we can use modern inventions to build more efficiently in cities instead of expanding into the wild. Moreover, green technology allows us to create “vertical forests” on buildings, which combines construction with nature. In conclusion, although economic growth is important, protecting our forests is a necessary priority for the survival of future generations.

OPINION PARAGRAPH 44

Should male and female professional athletes receive the same amount of prize money?

I strongly believe that male and female athletes should receive equal prize money because they put in the same amount of hard work, training, and dedication to reach the top level of their sport. On the one hand, the physical and mental demands of professional sports are the same for everyone, regardless of gender. For example, a female volleyball player trains just as many hours as a male player and faces the same risks of injury and pressure. Also, providing equal pay encourages more young girls to participate in sports and stay active. On the other hand, some people argue that men should be paid more because their matches often attract more viewers and sponsors. However, the popularity of women’s sports is growing rapidly, and fair pay is an essential step toward total equality in society. Moreover, the value of a sport should be measured by the skill of the athletes, not just by the money it makes. In conclusion, although there are differences in sports marketing, equal pay is a matter of fairness and respect for all athletes.

OPINION PARAGRAPH 45

Will “flying taxis” be a better invention for transportation than high-speed trains?

I believe that high-speed trains are a better invention for the future because they are more environmentally friendly and can carry many more people at once. On the one hand, trains use electricity and move along fixed tracks, which is a very safe and efficient way to travel between cities. For example, a single high-speed train can carry hundreds of passengers, reducing the number of cars on the road and lowering pollution. Also, train stations are usually located in city centers, making them very convenient. On the other hand, some people argue that flying taxis are better because they can travel directly to any location and avoid traffic jams on the ground. However, the technology for flying cars is very expensive, and having thousands of vehicles in the air could be dangerous and noisy. Moreover, protecting nature requires us to move away from individual travel toward shared public transport. In conclusion, although flying taxis sound like an exciting invention, high-speed trains remain the best choice for sustainable and reliable travel.

OPINION PARAGRAPH 46

Should the internet be free for every person in the world?

I strongly believe that the internet should be free for everyone because it is a vital invention that provides equal access to education and job opportunities. On the one hand, the internet is a massive library of knowledge that can help anyone, anywhere, learn a new language or a skill. For example, a student living in a small village could use the free internet to take an online course from a famous university, which would change their entire future. Also, it allows people to stay connected with their families and participate in the modern economy. On the other hand, some people argue that providing free internet is too expensive for governments and that private companies should be allowed to charge for it. However, access to information is now a basic human right, and the cost of the project would be balanced by the economic growth it creates. Moreover, free internet would bridge the gap between rich and poor countries. In conclusion, although it is a difficult project to organize, making the internet free is a necessary step toward a fair and educated world.

OPINION PARAGRAPH 47

Should people be required to spend at least one hour in nature every day?

I believe that spending time in nature should be a daily requirement because it significantly improves mental clarity and reduces the stress of modern life. On the one hand, natural environments provide fresh air and quiet surroundings that help the brain rest. For example, a student who walks through a park after a long day of studying will likely feel more refreshed and ready to focus on their homework. Also, being outdoors encourages physical activity, which is essential for a healthy body. On the other hand, some people argue that they are too busy with work or school and do not have time to go outside. However, even a short walk can be integrated into a daily schedule and leads to better productivity in the long run. Moreover, connecting with nature helps people appreciate the environment and want to protect it. In conclusion, although it might seem difficult for busy people, making time for nature is a vital investment in our overall well-being.

OPINION PARAGRAPH 48

Should families ban smartphones during dinner time?

I strongly believe that families should ban smartphones during meals because it allows people to have meaningful conversations and strengthens family relationships. On the one hand, dinner is often the only time of day when the whole family is together. For example, if everyone is looking at their own screen, they miss the chance to talk about their day or share their feelings with their parents and siblings. Also, eating without distractions helps people focus on their food and develop healthier eating habits. On the other hand, some people argue that they need their phones for work or to stay connected with friends. However, most messages can wait for thirty minutes, and the quality of real-life connection is much more important. Moreover, setting this rule teaches children how to use technology responsibly. In conclusion, although smartphones are useful inventions, keeping them away from the dinner table is necessary for a happy and connected home.

OPINION PARAGRAPH 49

Should parents limit the amount of time children spend playing with electronic toys?

I believe that parents should place strict limits on electronic toy usage because traditional play is essential for developing a child's imagination and social skills. On the one hand, modern electronic toys with flashing lights and screens are engaging inventions that can teach basic shapes, numbers, or languages very quickly. For example, a young child might learn English vocabulary from an interactive tablet game before they even start school. Also, these devices can keep children quiet and entertained when parents are busy. On the other hand, some argue that technology is the future and children need to use it as much as possible to prepare for life. However, spending too much time with screens can reduce a child's attention span and prevent them from playing outside in nature. Moreover, traditional toys like blocks or sports balls require children to create their own stories and interact face-to-face with friends. In conclusion, although digital toys have educational value, limiting their use is necessary to ensure that children grow up with active minds and healthy bodies.

OPINION PARAGRAPH 50

Should stores be banned from selling plastic bottled water if tap water is safe to drink?

I strongly believe that stores should be banned from selling plastic bottled water because it creates massive environmental waste and tap water is a much cheaper, sustainable option. On the one hand, plastic bottles are a major source of pollution that harms our nature, taking hundreds of years to break down in landfills. For example, millions of plastic bottles are thrown away every day, and many end up polluting our oceans and endangering marine life. Also, carrying a reusable bottle is a simple habit that protects the environment. On the other hand, some people argue that selling bottled water is necessary for convenience when people are traveling or exercising outdoors. However, cities can easily install more public water fountains in parks and school gyms to solve this problem. Moreover, the invention of advanced water filtration systems makes tap water completely safe and healthy for everyone. In conclusion, although bottled water is convenient, the severe damage it causes to nature justifies a total ban in favor of reusable alternatives.

OPINION PARAGRAPH 51

Will audiobooks completely replace traditional printed books in the future?

I do not believe that audiobooks will completely replace printed books because the physical experience of reading offers unique cognitive benefits that digital audio cannot match. On the one hand, audiobooks are a fantastic modern invention that allows people to listen to stories while doing other tasks, such as walking in nature or traveling. For example, a busy student can listen to an English literature assignment while commuting to their lessons, which saves a lot of time. Also, they are excellent for people with visual difficulties. On the other hand, many people argue that audiobooks are superior because they are easier to store and carry on a smartphone. However, reading a printed book helps the brain focus more deeply, leading to better memory retention and less eye strain compared to digital devices. Moreover, the physical feeling of turning pages creates a personal connection to the text that a digital file cannot replicate. In conclusion, although audiobooks are a highly convenient invention, the traditional printed book will always hold a valuable place in education and daily life.

OPINION PARAGRAPH 52

Should governments spend more money on funding public sports facilities or on building art museums and theaters?

I strongly believe that investing in public sports facilities is better than funding art museums because accessible athletic spaces directly improve the physical health and social unity of the entire community. On the one hand, visiting museums and theaters is a wonderful way to learn about history, culture, and creative inventions. For example, a student who visits an art gallery can expand their imagination and develop a deeper appreciation for human creativity. Also, the arts are essential for preserving the identity of a society. On the other hand, some people argue that cultural venues are more important because they attract international tourists and boost the country's prestige. However, the modern world faces a massive crisis of physical inactivity, making local gyms, football pitches, and volleyball courts a far more urgent necessity. Moreover, playing sports at local centers teaches young people teamwork, discipline, and healthy living habits that they cannot learn by simply looking at a painting. In conclusion, although the arts enrich our minds, the critical health benefits of public sports facilities make them the best choice for public funding.

OPINION PARAGRAPH 53

Should cities ban all cars from city centers to create large, open zones for walking and outdoor sports?

I believe that car-free city centers are an excellent idea because they drastically reduce urban pollution and encourage citizens to lead active, healthy lifestyles. On the one hand, removing vehicles creates a peaceful and safe environment where people can move freely without the fear of traffic. For example, transforming a busy downtown street into a pedestrian zone allows children and students to ride bicycles, skate, or play casual matches of volleyball without danger. Also, replacing parking spaces with small green parks and outdoor gym equipment makes exercise accessible to everyone for free. On the other hand, some business owners argue that banning cars will hurt commerce because customers will find it too difficult to visit shops and transport heavy goods. However, studies show that pedestrian streets actually attract more foot traffic, which benefits local restaurants and traditional stores. Moreover, modern public transport inventions like electric buses and light rails can easily move people into the center sustainably. In conclusion, although it requires a big change in transportation habits, car-free zones are the best choice for healthy citizens and a cleaner environment.

OPINION PARAGRAPH 54

Should families stop eating at international fast-food restaurants and only eat traditional home-cooked meals?

I strongly believe that families should prioritize traditional home-cooked meals over international fast food because fresh ingredients are essential for protecting long-term health. On the one hand, home cooking allows parents to control the amount of salt and oil in their children's diet. For example, our family cooked a beautiful traditional dinner last night, and everyone felt energetic and healthy afterward. Also, preparing meals together at home strengthens family relationships. On the other hand, many teenagers argue that fast-food restaurants are better because global companies have created highly convenient and delicious menus for busy people. However, fast food contains dangerous amounts of sugar and fat, which has caused global obesity rates to rise significantly in recent years. In conclusion, although fast food offers a quick and tasty option for a busy day, the superior nutritional value of home-cooked food makes it the absolute best choice for a healthy life.

OPINION PARAGRAPH 55

Should governments spend millions of dollars on space travel and exploring Mars, or should that money be used on Earth?

I believe that national budgets should be spent on solving urgent problems on Earth before any money is used for exploring outer space because millions of people on our planet still lack basic human needs. On the one hand, Earth faces critical issues like poverty, lack of clean water, and poor school systems. For example, if public funds are invested in green energy inventions and better public schools, the quality of human life will be improved almost immediately. On the other hand, some scientists argue that space travel is necessary because valuable technological breakthroughs were discovered during past rocket missions. However, these great innovations will mean very little if our environment is completely destroyed by climate change, and billions of dollars will be wasted if we do not save our home planet first. In conclusion, although exploring Mars is a fascinating scientific dream, the survival and well-being of the human population on Earth must always be the first priority.

OPINION PARAGRAPH 56

Is academic success determined more by a student's natural talent or by their hard work and personal discipline?

I strongly believe that hard work and personal discipline are far more important for achieving success than natural talent because dedication allows a student to overcome any difficult challenge. On the one hand, consistent practice trains the brain to solve complex problems over time. For example, before the final exam was held last week, the top students had studied for three hours every single day. As a result, excellent marks had been achieved by those who practiced regularly, even if they were not naturally gifted. Also, discipline builds a strong character that helps people handle failure without giving up. On the other hand, some people argue that natural talent is better because gifted children learn new language rules or math formulas much faster than others. However, talent is completely wasted if a student becomes lazy and refuses to do their homework. In conclusion, although natural intelligence gives a small advantage at the beginning, determination and hard work remain the true keys to long-term success.

OPINION PARAGRAPH 57

Is individual action or strict government regulation more effective in combating global pollution?

I strongly believe that strict government regulation is the most effective way to combat pollution because individual actions alone cannot stop large-scale industrial damage to our planet. On the one hand, personal habits are important, and a citizen can make a little difference by recycling plastic or turning off unused lights. For example, if all students at a center like ZEYN use reusable bags, there will be no trash left in the courtyard. Also, widespread green habits create an educated community that respects wildlife. On the other hand, some people argue that personal freedom is more important and that governments should have none of the power to control business manufacturing. However, a few simple household changes will not stop major factories from releasing toxic smoke into the atmosphere every single day. Moreover, voluntary efforts are rarely enough unless they are backed by official financial penalties. In conclusion, although individual dedication is beautiful, sweeping government laws are a vital necessity to protect our nature on a global scale.

OPINION PARAGRAPH 58

Is it better for young students to focus on mastering technical hard skills or developing interpersonal soft skills?

I believe that developing interpersonal soft skills is far more important for a student's future career because communication and teamwork are the ultimate foundation of professional leadership. On the one hand, learning hard skills like coding or accounting helps a graduate complete specific workplace tasks smoothly. For example, a student who learns computer science will find it significantly easier to build software or fix technical errors during their first job. On the other hand, some educators argue that technical excellence is by far the most critical factor for earning a high salary in the modern tech industry. However, technologies change rapidly, making hard skills obsolete, whereas soft skills like emotional intelligence remain useful for a lifetime. Moreover, the much better workers are always those who can cooperate with colleagues and solve team conflicts peacefully under pressure. In conclusion, although technical training gives a temporary advantage, mastering emotional soft skills is the best choice for long-term career success.

OPINION PARAGRAPH 59

Does true human happiness come from financial wealth and success, or from relationships with family and friends?

I strongly believe that true human happiness comes from meaningful relationships with family and friends rather than from material wealth because emotional support provides a deep sense of security that money cannot buy. On the one hand, financial success can buy comfortable houses, modern cars, and expensive holidays. For example, during a seminar last month, a wealthy businessman stated that his money had given him great comfort and comfort was essential for a peaceful life. Also, having a high income reduces the everyday stress of paying bills. On the other hand, some people argue that wealth is superior because it gives individuals the power to control their own destiny. However, historical studies revealed that isolated millionaires often felt deeply lonely despite their millions. Moreover, psychological researchers recently concluded that strong social bonds were the truest indicators of long-term life satisfaction. In conclusion, although money offers luxurious convenience, the love and laughter shared with family remain the genuine keys to a happy existence.

OPINION PARAGRAPH 60

Should teenagers follow their parents' career choices?

I believe that young people should make their own independent career decisions rather than blindly following their parents' choices because the modern job market changes too quickly. On the one hand, older generations possess valuable life wisdom. For example, my grandfather recently suggested looking for a traditional job to ensure long-term safety. Also, my parents always request that I listen to their advice. On the other hand, some strict families openly order their children to follow in their footsteps against their will. However, professional success requires personal passion, which cannot exist if a student is forced into a career. In conclusion, independent decision-making is the best choice for a young person's future happiness.

OPINION PARAGRAPH 61

Should we believe in superstitions or science?

I strongly believe that people should rely entirely on scientific facts to guide their daily actions rather than believing in traditional superstitions because logical reasoning prevents unnecessary fear and leads to smarter choices. On the one hand, science provides clear, proven explanations for how the world works. For example, if a modern student fails an exam, they know it happened because they did not study enough, let's look at the facts, shall we? Also, understanding physics or biology helps us solve real problems, and I don't let old myths dictate my routine. On the other hand, many traditional communities still avoid walking under ladders or fear black cats, and neither do my older relatives like to break mirrors because they believe it brings bad luck. However, base-less beliefs can make people anxious or stop them from taking personal responsibility for their lives. Moreover, I prefer to live with clear logic, and so do most of my classmates at the center. In conclusion, although superstitions are an interesting part of historical folklore, relying on scientific evidence is the absolute best way to make intelligent decisions in the modern world.

OPINION PARAGRAPH 62

Has the invention of digital smartphone photography ruined the value of traditional painted art?

I do not believe that the invention of smartphone cameras has ruined the value of traditional painted art because a physical painting possesses an emotional depth and texture that a digital file cannot replicate. On the one hand, digital photography is incredibly fast and convenient. For example, millions of high-quality pictures have been uploaded to social media platforms this week alone, allowing people to share their daily experiences instantly. Also, advanced editing software helps amateur photographers create stunning visual images effortlessly. On the other hand, some art critics argue that traditional galleries will close because classic painting techniques have been abandoned by the younger generation. However, visiting a museum to look at a canvas that has been meticulously crafted by a human hand over many months is an irreplaceable cultural experience. Moreover, true artistic value comes from human imagination and effort, which can never be replaced by a phone app. In conclusion, although photography is a brilliant modern invention, the unique beauty of traditional art ensures it will always be loved and respected.

OPINION PARAGRAPH 63

Should young teenagers try to start charity projects to change their community, or should they wait until they become adults?

I believe that young teenagers should actively try to start community projects right now because youth leadership brings fresh energy and creative solutions to local problems. On the one hand, when schoolers participate in volunteer work, they develop invaluable life skills. For example, a teenager who organizes a neighborhood cleaning day becomes highly responsible, and their teamwork skills look fantastic to future university entrance committees. Also, helping others makes young citizens feel incredibly proud and connected to their neighbors. On the other hand, some parents argue that teenagers should wait until they are older because managing a public project seems too difficult and stressful for an inexperienced child. However, modern technology allows teenagers to spread good ideas instantly, making global communication sound remarkably simple today. Moreover, waiting until adulthood wastes many years where young minds could be creating positive changes. In conclusion, although adulthood brings more resources, the passion and determination of young change-makers are essential for building a better world today.

OPINION PARAGRAPH 64

Should global organizations spend money to protect rare minority languages from disappearing, or should everyone learn one global language?

I strongly believe that international organizations should spend funds to protect rare minority languages because language is the absolute foundation of cultural identity. On the one hand, learning a global language like English offers incredible practical benefits in the modern world. For example, a student who speaks fluent English can easily access the internet to read scientific research or communicate with classmates from different countries. Also, global commerce requires zero article shared communication to function efficiently. On the other hand, some economists argue that protecting an endangered language is a waste of money because it serves no commercial purpose. However, when the unique vocabulary of a native tongue disappears, the historical wisdom and traditions of that specific community are lost forever. Moreover, human culture is enriched by diversity, which is far more valuable than simple economic convenience. In conclusion, although speaking a global language is necessary for career success, protecting endangered minority languages is a vital duty for humanity.

OPINION PARAGRAPH 65

Is traveling better than studying at home?

I strongly believe that traveling to a foreign country is far more valuable for a young person's development than studying at home because discovering a new culture builds deep independence. On the one hand, studying at home allows you to focus entirely on your academic lessons. For example, before I entered university, I had been reading global history books for months, which helped me get high marks. On the other hand, some parents argue that international travel is just a distraction from real education. However, while I was exploring an international city last year, I realized that textbooks cannot show the true reality of the world. In conclusion, the life lessons gained through travel make it the superior choice.

OPINION PARAGRAPH 66

Is it better to live in a city or a village?

I believe that living in a quiet village house is much better than a city apartment because it offers a peaceful environment close to nature. On the one hand, rural areas provide clean air and open space. For example, growing organic vegetables in a garden is a healthy choice, and parents love to sit outside without hearing traffic noise. Also, village communities are close and friendly. On the other hand, some people prefer living in a modern city apartment because they want to enjoy quick access to shops and transport. However, dealing with urban pollution can be very stressful over time. In conclusion, the health benefits and peace of a village make it the best place to call home.

OPINION PARAGRAPH 67

Should schools force students to wear uniforms?

I believe that schools must strictly enforce a mandatory uniform policy because it promotes equality among students. On the one hand, uniforms hide the economic differences between families. For example, children don't have to worry about buying expensive designer clothes just to fit in. Also, a dress code ensures that students cannot wear inappropriate clothes to a place of learning. On the other hand, some teenagers argue against the rules because they feel they must have total freedom to express their fashion style. However, schoolers mustn't use clothing to judge or bully others. In conclusion, the unity and equality that uniforms bring make them an essential rule for school.

OPINION PARAGRAPH 68

Are local festivals better than global ones?

I strongly believe that preserving traditional local festivals is much better than adopting global ones because unique holidays protect a country's historical identity. On the one hand, local celebrations connect younger generations to their roots through music and food. For example, regional events allow old customs to survive, whereas global commercial holidays often lack deep meaning. On the other hand, some people argue that international festivals are good although they mostly focus on shopping. However, even though global events are fun, they frequently overshadow local heritage. In conclusion, while global holidays offer entertainment, the historical value of local festivals makes them the best choice.

OPINION PARAGRAPH 69

Is success caused by talent or hard work?

I strongly believe that personal hard work and discipline are far more important for success than natural talent because dedication allows you to overcome any difficult challenge. On the one hand, consistent practice trains the brain to solve complex problems over time. For example, before the final exam was held, the top students had studied for hours every day. As a result, excellent marks had been achieved by those who practiced regularly. On the other hand, some people argue that talent is better because gifted children learn formulas faster. However, talent is completely wasted if a student becomes lazy. In conclusion, determination and hard work are the true keys to long-term success.

OPINION PARAGRAPH 70

Can teenagers change their community?

I believe that young teenagers should start local charity projects right now because youth leadership brings fresh energy to community problems. On the one hand, participating in volunteer work helps schoolers develop invaluable life skills. For example, a teenager who organizes a neighborhood cleaning day becomes highly responsible, and their teamwork skills look fantastic on university applications. Also, helping others makes young citizens feel incredibly proud. On the other hand, some parents argue that teenagers should wait because managing a public project seems too difficult for a child. However, modern technology allows young people to spread good ideas instantly. In conclusion, the passion of young change-makers makes starting early the absolute best choice.

OPINION PARAGRAPH 71

Is strict discipline or independence better for teenagers?

I believe that giving teenagers personal independence is much better than enforcing strict parental rules because real discipline comes from making your own choices. On the one hand, strict household rules can prevent immediate bad behavior. For example, if parents set a strict curfew, a teenager is able to avoid dangerous situations at night. On the other hand, some traditional families argue that strict control is necessary because teenagers are about to enter a dangerous adult world. However, if a teenager is never allowed to make decisions, they will fail to develop self-reliance before a major life change is due to happen. In conclusion, giving teenagers independence is the best way to raise a responsible adult.

OPINION PARAGRAPH 72

Are soft skills better than technical skills?

I believe that developing interpersonal soft skills is far more important for a student's future career because communication is the foundation of professional leadership. On the one hand, learning technical hard skills helps a graduate complete specific tasks. For example, a student who learns computer programming will find it significantly easier to fix technical errors during their first job. On the other hand, some educators argue that technical excellence is by far the most critical factor for earning a high salary. However, technologies change rapidly, whereas soft skills like teamwork remain much more useful for a lifetime. In conclusion, mastering emotional soft skills is the best choice for long-term career success.

OPINION PARAGRAPH 73

Should students question what they learn?

I believe that teachers should actively encourage students to question information rather than blindly memorizing facts because critical thinking is the foundation of intelligence. On the one hand, memorization helps schoolers pass traditional exams quickly. For example, when a student knows whether the mathematical formula is correct, they can solve a problem without wasting time. On the other hand, some traditional educators wonder why questioning is important if the facts are already proven. However, the modern world changes rapidly, and students must understand how new inventions are created through exploration. In conclusion, teaching students how to analyze data critically is the absolute best way to prepare them for the future.

OPINION PARAGRAPH 74

Have fast-food restaurants changed how we eat?

I strongly believe that fast-food restaurants have changed our global eating habits for the worse because they encourage people to choose unhealthy, processed meals over fresh options. On the one hand, fast food offers incredible speed for busy families. For example, almost everyone has recently eaten a quick burger when they did not have time to cook at home. Also, massive global companies have made these meals very cheap. On the other hand, some people argue that fast food is a great modern invention. However, many young children have never tasted traditional vegetables, and health statistics have just revealed a massive rise in childhood obesity. In conclusion, although fast food is highly convenient, the negative impact it has on public health makes home-cooked meals the superior choice.

OPINION PARAGRAPH 75

Do we have to follow strict public manners?

I believe that citizens must strictly follow social etiquette rules in public places because good manners create a respectful and safe community for everyone. On the one hand, public rules protect our shared comfort. For example, you have to speak quietly when you ride on public buses or study inside an educational center. Also, keeping streets clean ensures that our neighborhoods look beautiful. On the other hand, some people argue against rules because they want total personal freedom. However, individuals don't have to sacrifice their personality just to show basic politeness to their neighbors. Moreover, we mustn't behave selfishly if we want to live in a peaceful society. In conclusion, although strict etiquette takes effort, following these rules is the best choice for a civilized world.

OPINION PARAGRAPH 76

Is looking at art a waste of time?

I strongly believe that studying traditional art is very valuable for young people because creative masterpieces expand our imagination and emotional intelligence. On the one hand, viewing classic paintings connects us deeply to historical events. For example, visiting a museum can be a highly educational experience that teaches students about old customs and cultures. Also, creating your own drawings makes you feel deeply relaxed after a stressful school day. On the other hand, some practical people argue that art is a completely useless subject because it does not teach business skills. However, a world without creativity would be absolutely terrible and boring for the human mind. In conclusion, although science provides logical facts, the spiritual beauty of visual art makes it an essential part of life.

OPINION PARAGRAPH 77

Is university education necessary for a good job?

I strongly believe that getting a university degree is still much better than entering the workforce immediately after high school because higher education opens doors to advanced leadership positions. On the one hand, starting a business early allows a teenager to earn money quickly. For example, a high school graduate can find manual labor or retail jobs right away. On the other hand, some people argue that practical experience is superior to sitting in a classroom. However, modern technical fields require specialized knowledge, making university training far more valuable for long-term career growth. In conclusion, although starting work early offers temporary financial freedom, a university education remains the best choice for future professional success.

OPINION PARAGRAPH 78

Is it better for students to study late at night or sleep early?

I believe that students should sleep early instead of studying late at night because a rested brain is far more effective at learning complex information. On the one hand, midnight hours provide a very quiet environment for revision. For example, a schooler can read formulas without any daytime interruptions or noise. On the other hand, some teenagers argue that staying up late is superior because they feel creative during the night. However, sleep deprivation damages your memory retention, and students had better protect their physical health if they want to pass difficult exams. Moreover, I would rather wake up early with a fresh mind than struggle through an assessment while feeling completely exhausted. In conclusion, sleeping early remains the best choice for academic success.

OPINION PARAGRAPH 79

Is it better to wear traditional clothes or modern global fashion?

I strongly believe that teenagers should wear modern global fashion for daily life rather than traditional clothing because modern clothes are designed for comfort and active routines. On the one hand, traditional garments connect us deeply to national heritage. For example, wearing historic clothing during national holidays makes young people feel proud of their roots. On the other hand, some elders argue that global trends ruin cultural identity although fashion has always changed over time. However, even though historical outfits are beautiful, they are far too heavy and complex for a normal day at school or university. In conclusion, while we must respect our historical customs, choosing modern fashion remains the best choice for everyday convenience.

OPINION PARAGRAPH 80

Should governments make public transport completely free?

I believe that governments should make public transport completely free because it is the most effective way to reduce city traffic and air pollution. On the one hand, maintaining buses and trains requires significant public funding. For example, city councils have been spending massive amounts of money on fuel and driver salaries for decades. On the other hand, some economists argue that free transport is an impossible financial burden. However, private cars have been releasing toxic carbon gases into our atmosphere non-stop, and urban air quality have been worsening at an alarming rate. In conclusion, the urgent duty to protect public health and nature makes free transit the absolute best choice.

OPINION PARAGRAPH 81

Is it better to choose a career for passion or for money?

I strongly believe that choosing a career based on personal passion is far more important than picking a job just for a high salary because true professional dedication comes from emotional satisfaction. On the one hand, a wealthy job helps a person buy modern cars and comfortable houses. For example, an individual who chooses banking or corporate law will find it significantly better for their immediate bank account. On the other hand, some traditional parents argue that financial safety is the only critical factor for survival. However, working in a field you hate causes severe mental exhaustion over time, whereas passion keeps you motivated for a lifetime. In conclusion, following your genuine interests remains the best choice for long-term success.

OPINION PARAGRAPH 82

Is reading a book better than watching television?

I believe that reading a book is much better than watching television because literature trains your brain and expands your vocabulary. On the one hand, television provides quick, effortless entertainment after a long day. For example, modern streaming apps have dominated global entertainment fields since digital platforms became popular. On the other hand, some people argue that watching documentaries is superior because it shows real-world images. However, television keeps your mind completely passive, whereas reading forces you to imagine the story yourself. Moreover, I have collected traditional books for several years, and they have greatly improved my focus. In conclusion, although television is convenient, the mental benefits of reading make it the best choice for free time.

OPINION PARAGRAPH 83

Is a vegetarian diet better than eating meat?

I believe that a balanced diet containing meat is much better than a strict vegetarian diet because animal proteins provide essential nutrients for a growing body. On the one hand, eating vegetables is highly beneficial for your digestive system. For example, science has already proven that a plant-based routine lowers the risk of heart disease. On the other hand, some health experts argue that avoiding meat is superior because it protects animal lives. However, many young vegetarians have not learned how to replace vital iron and vitamins safely yet, which can cause severe weakness over time. In conclusion, although eating vegetables is wonderful, including meat in your meals remains the best choice for overall physical health.

OPINION PARAGRAPH 84

Is recycling enough to save our oceans?

I strongly believe that recycling household trash is not enough to save our oceans because global factories must stop producing single-use plastic completely. On the one hand, sorting waste helps reduce the immediate amount of garbage in local landfills. For example, responsible citizens have been recycling plastic bottles and paper packaging for several decades. On the other hand, some manufacturing companies argue that small community efforts are sufficient to protect wildlife. However, massive industrial plants have been dumping chemical waste into global waters non-stop, and oceanic pollution has been worsening rapidly. In conclusion, although personal recycling is useful, enforcing a strict ban on plastic production is the absolute best choice.

OPINION PARAGRAPH 85

Is it better to work from home or in an office?

I believe that working inside a professional office is far more beneficial for a person's career than working from home because daily face-to-face interaction builds strong team collaboration. On the one hand, operating from a home computer offers great personal flexibility. For example, skipping a long morning traffic commute is significantly better for an employee's daily stress levels and energy. On the other hand, some modern digital companies argue that remote work is the absolute future of business. However, isolated workers frequently suffer from severe loneliness and communication errors, whereas an office environment keeps a team unified. In conclusion, although working remotely is highly comfortable, an office setting remains the best choice for long-term professional success.

OPINION PARAGRAPH 86

Can planting trees in cities stop air pollution?

I believe that planting trees in cities is helpful but not enough to stop pollution because giant factories must reduce their toxic emissions. On the one hand, adding green spaces improves urban areas. For example, if all students plant small trees around their schools, it will create a little fresh oxygen for the local neighborhood. Also, urban parks ensure that there is no empty, dusty land left in the center. On the other hand, some city planners argue that planting greenery is the ultimate solution. However, a few new parks will not stop thousands of private cars from polluting the atmosphere every day. In conclusion, although urban trees are beautiful, strict factory regulations remain the best choice to save our nature.

OPINION PARAGRAPH 87

Should teenagers learn traditional folk dances?

I strongly believe that teenagers should learn traditional folk dances because preserving cultural art forms keeps a nation's history alive. On the one hand, modern dances are highly popular among young people today. For example, international music trends dominate global media platforms, whereas historical folk arts receive very little public attention. On the other hand, some teenagers argue that old customs are boring although they have never tried practicing them. However, even though modern hobbies are entertaining, learning regional dances builds deep national pride and coordination. In conclusion, while global pop culture is fun, protecting our historical heritage through traditional dance remains the best choice.

OPINION PARAGRAPH 88

Does experiencing failure help you achieve success?

I strongly believe that experiencing failure is essential for achieving true success because mistakes teach you valuable lessons that books cannot provide. On the one hand, avoiding mistakes keeps your academic path smooth and comfortable. For example, before the top student failed their first major university test last week, they had believed that learning was effortless. As a result of that mistake, a much smarter study strategy had been created by the student to improve their weak skills. On the other hand, some parents argue that failure is completely negative because it reduces a child's confidence. However, true determination is only built when you learn how to stand up after a defeat. In conclusion, although failure feels painful, the wisdom gained from it remains the true key to long-term success.

OPINION PARAGRAPH 89

Should schools have strict rules for classroom behavior?

I strongly believe that schools must enforce strict rules for classroom behavior because a quiet and disciplined environment is necessary for effective learning. On the one hand, absolute freedom allows children to express themselves without fear. For example, relaxed classrooms let students speak whenever they want, which can make lessons feel fun. On the other hand, some modern educators argue that strict discipline limits a child's natural happiness. However, teachers cannot explain complex topics if everyone speaks at the same time, and schoolers mustn't interrupt their classmates during an assessment. Moreover, students must respect the learning rights of others. In conclusion, although basic freedom is pleasant, maintaining strict rules remains the best choice for academic success.

OPINION PARAGRAPH 90

Is it better to study alone or with a group?

I believe that studying alone is far more effective for a student's academic progress than preparing in a large group because independent learning allows you to focus completely on your own weaknesses. On the one hand, group study sessions let classmates share different ideas. For example, explaining a difficult grammar topic to a peer can be significantly better for testing your own understanding of a lesson. On the other hand, some educators argue that constant group work is the ultimate way to learn. However, group sessions often become noisy and lead to social distractions, whereas studying alone trains your brain to concentrate deeply. In conclusion, although cooperation has some value, independent revision remains the best choice for passing difficult exams.

OPINION PARAGRAPH 91

Should young people keep old family traditions alive?

I strongly believe that young people must actively preserve traditional family customs because historical celebrations protect a community's unique identity. On the one hand, modern lifestyles change rapidly, and following international trends allows teenagers to feel connected to global culture. For example, I am always open to learning about new global habits, aren't I? On the other hand, some people argue that old customs are outdated in a digital world. However, if we forget our roots, our country's history will disappear completely, so let's protect our national heritage for the next generation, shall we? Moreover, sharing historic holidays builds strong family bonds, so do not abandon these beautiful celebrations, will you? In conclusion, preserving traditions remains the absolute best choice.

OPINION PARAGRAPH 92

Is it better to learn how to cook or buy prepared meals?

I strongly believe that learning how to cook is much better than buying prepared meals because homemade food allows you to control the freshness and health of your ingredients. On the one hand, ordering delivery food saves a lot of time for busy students. For example, almost everyone has recently ordered a fast meal when they were too tired to stand in the kitchen. On the other hand, some people argue that restaurant food is superior because professional chefs prepare it. However, factory meals contain too much salt, and many teenagers have never boiled a fresh vegetable on their own. Moreover, health studies have just shown that home cooking prevents long-term illnesses. In conclusion, although buying meals is easy, learning to cook remains the best choice.

OPINION PARAGRAPH 93

Is choosing a career path early in life beneficial?

I believe that choosing a career path early in life is highly beneficial because it allows students to focus their academic energy on specific goals. On the one hand, exploring different interests gives teenagers a broad understanding of the world. For example, before I decided to enter university, I had studied a wide variety of subjects. As a result of my decision, a very clear pathway to my dream profession had been established by the end of high school. On the other hand, some counselors argue that choosing early restricts your options. However, early preparation gives you a massive advantage over those who hesitate. In conclusion, early goal-setting remains the true key to long-term success.

OPINION PARAGRAPH 94

Should parents let teenagers set their own bedtimes?

I believe that parents must strictly regulate their children's sleeping schedules because teenagers need fixed rest patterns to maintain physical health and academic focus. On the one hand, personal freedom allows young people to manage their independent routines. For example, setting your own bedtime can make you feel mature and responsible. On the other hand, some modern psychologists argue that flexible rules build self-reliance. However, the growing brain cannot function correctly without sufficient sleep, and teenagers mustn't stay up late using smartphones before an exam. Moreover, schoolers must learn discipline. In conclusion, although personal independence is pleasant, maintaining strict parental bedtime rules remains the best choice for student success.

OPINION PARAGRAPH 95

Should young people always shake hands when meeting someone new?

I believe that young people should always practice formal handshakes when greeting others because displaying good manners shows immediate respect and professionalism. On the one hand, modern casual greetings allow teenagers to feel relaxed and equal. For example, a simple wave or nod is standard among close friends, and I am a very supportive peer to my classmates, aren't I? On the other hand, some teenagers argue that strict social etiquette is outdated in a modern world. However, a weak or missing greeting leaves a highly negative impression in formal environments, so let's practice proper social etiquette, shall we? Moreover, greeting people politely opens future career doors, so try to remember this important custom, will you? In conclusion, practicing traditional manners remains the absolute best choice.

OPINION PARAGRAPH 96

Should governments spend public funds on restoring ancient monuments?

I strongly believe that governments must spend public money on restoring ancient monuments because historical architecture protects a nation's cultural identity and educates future generations. On the one hand, maintaining old buildings requires significant financial resources. For example, city councils must pay expert architects to repair ancient stone walls, whereas modern roads and schools also need urgent funding. On the other hand, some citizens argue that restoring old ruins is a waste of money although these sites attract thousands of international tourists. However, even though modern infrastructure is vital, our historical heritage is irreplaceable. In conclusion, while budgets are limited, protecting our history remains the best choice.

OPINION PARAGRAPH 97

Is earning a lot of money the best sign of a successful life?

I do not believe that earning a lot of money is the best sign of success because true accomplishment comes from helping your community and achieving personal happiness. On the one hand, financial wealth provides massive comfort and security. For example, before the successful entrepreneur retired last year, they had accumulated a large fortune. As a result of their hard work, expensive cars and luxury houses had been bought by their company. On the other hand, some people argue that money is everything because it brings power. However, a wealthy person can still feel deeply lonely and miserable without family. In conclusion, although financial security is useful, a meaningful life remains the true key to success.

OPINION PARAGRAPH 98

Is the internet the most important invention of the modern age?

I do not believe that earning a lot of money is the best sign of success because true accomplishment comes from helping your community and achieving personal happiness. On the one hand, financial wealth provides massive comfort and security. For example, before the successful entrepreneur retired last year, they had accumulated a large fortune. As a result of their hard work, expensive cars and luxury houses had been bought by their company. On the other hand, some people argue that money is everything because it brings power. However, a wealthy person can still feel deeply lonely and miserable without family. In conclusion, although financial security is useful, a meaningful life remains the true key to success.

OPINION PARAGRAPH 99

Should teenagers be allowed to use social media without parental supervision?

I strongly believe that parents must actively supervise their children's social media accounts because the digital world contains dangerous content that can harm young minds. On the one hand, smartphones allow teenagers to access educational videos instantly. For example, a student can join online study groups to improve their English skills. On the other hand, some teenagers argue that monitoring their profiles limits their personal freedom. However, young children cannot always identify online scams, and schoolers mustn't share personal information like home addresses with strangers. Moreover, families must talk openly about digital safety. In conclusion, although independent browsing is fun, maintaining parental supervision remains the best choice for online security.

OPINION PARAGRAPH 100

Should commercials for unhealthy junk food be banned on television?

I strongly believe that the government should completely ban junk food advertisements on television because these colorful commercials trick young children into choosing dangerous, processed meals. On the one hand, television networks rely heavily on advertising money to produce high-quality shows. For example, major fast-food corporations pay millions of dollars to display their burgers during popular family programs. On the other hand, some business managers argue that parents are entirely responsible for their children's diets. However, childhood obesity rates are rising rapidly, and our society had better restrict marketing before public health is ruined. Moreover, I would rather see advertisements for fresh fruits than toxic snacks. In conclusion, a total media ban remains the best choice.

OPINION PARAGRAPH 101

Should we follow traditional dining etiquette at home?

I strongly believe that families should always practice traditional dining etiquette at home because good table manners show respect for the person who cooked the meal. On the one hand, eating casually allows family members to feel completely relaxed after a long workday. For example, sitting on a sofa while watching television is very common today, and I am a very modern and open-minded person, aren't I? On the other hand, some teenagers argue that formal rules are unnecessary behind closed doors. However, a child who eats poorly at home will embarrass themselves at a formal restaurant, so let's practice correct manners daily, shall we? Moreover, always sit up straight at the dinner table, will you? In conclusion, home etiquette remains the absolute best choice.
